## NEW YORK CITY HOMELESSNESS The Basic Facts

- In recent years, homelessness in New York City has reached **the highest levels since the Great Depression of the 1930s**.
- In October 2011, there were an all-time record **41,200 homeless people**, including **10,000 homeless families with 17,000 homeless children**, sleeping each night in the New York City municipal shelter system. Families comprise three-quarters of the homeless shelter population.
- During the past City fiscal year (FY 2010), **an all-time record 113,553 different homeless men, women, and children** slept in the New York City municipal shelter system. This includes **an all-time record 42,888 different homeless New York City children**.
- The number of homeless New Yorkers who slept in the municipal shelter system during FY 2010 was **37 percent higher** than in FY 2002.
- Research shows that the **primary cause of homelessness, particularly among families, is lack of affordable housing**. Surveys of homeless families have identified the following major immediate, triggering causes of homelessness: **eviction; doubled-up or severely overcrowded housing; domestic violence; and hazardous housing conditions**.
- Research shows that, compared to homeless families, homeless single adults have much **higher rates of serious mental illness, addiction disorders, and other severe health problems**.
- Each night **thousands of unsheltered homeless people** sleep on New York City streets, in the subway system, and in other public spaces. There is no accurate measurement of New York City's unsheltered homeless population, and recent **City surveys significantly underestimate the number of unsheltered homeless New Yorkers**.
- Studies show that the **large majority of street homeless New Yorkers are people living with mental illness or other severe health problems**. Four out of five street homeless New Yorkers are men.
- As in other American cities, New York City's unsheltered homeless population is concentrated in the central business district – that is, midtown Manhattan. Surveys show that **nearly 60 percent of New York City's unsheltered homeless population is in Manhattan**.
- **African-American and Latino New Yorkers are disproportionately affected by homelessness**. Approximately 53 percent of New York City homeless shelter residents are African-American, 32 percent are Latino, 7 percent are white, 1 percent are Asian-American, 1 percent are Native American or other race/ethnicity, and 6 percent are of unknown race/ethnicity.

## Briefing Paper Record Homelessness: Impact on Children

November 21, 2011

By Giselle Routhier, Policy Analyst, Coalition for the Homeless

Amidst high unemployment, increasing poverty and an acute shortage of affordable housing, the number of people experiencing homelessness in New York City has reached an all-time high. As of the end of October 2011, nearly 17,000 homeless children bedded down in New York City shelters – the highest number ever recorded. As a result, an ever-increasing number of homeless students are struggling to get a decent education, and facing even greater challenges.

While poverty alone places great stress on students, the instability of homelessness adds more obstacles to a successful education than just poverty alone. A wealth of research has documented the difficulties homeless children face, from school disruption to emotional trauma and health problems.

### The Earliest Studies

Scholarly research over the last three decades has shown the deleterious effects of homelessness on children, particularly children's educational outcomes.

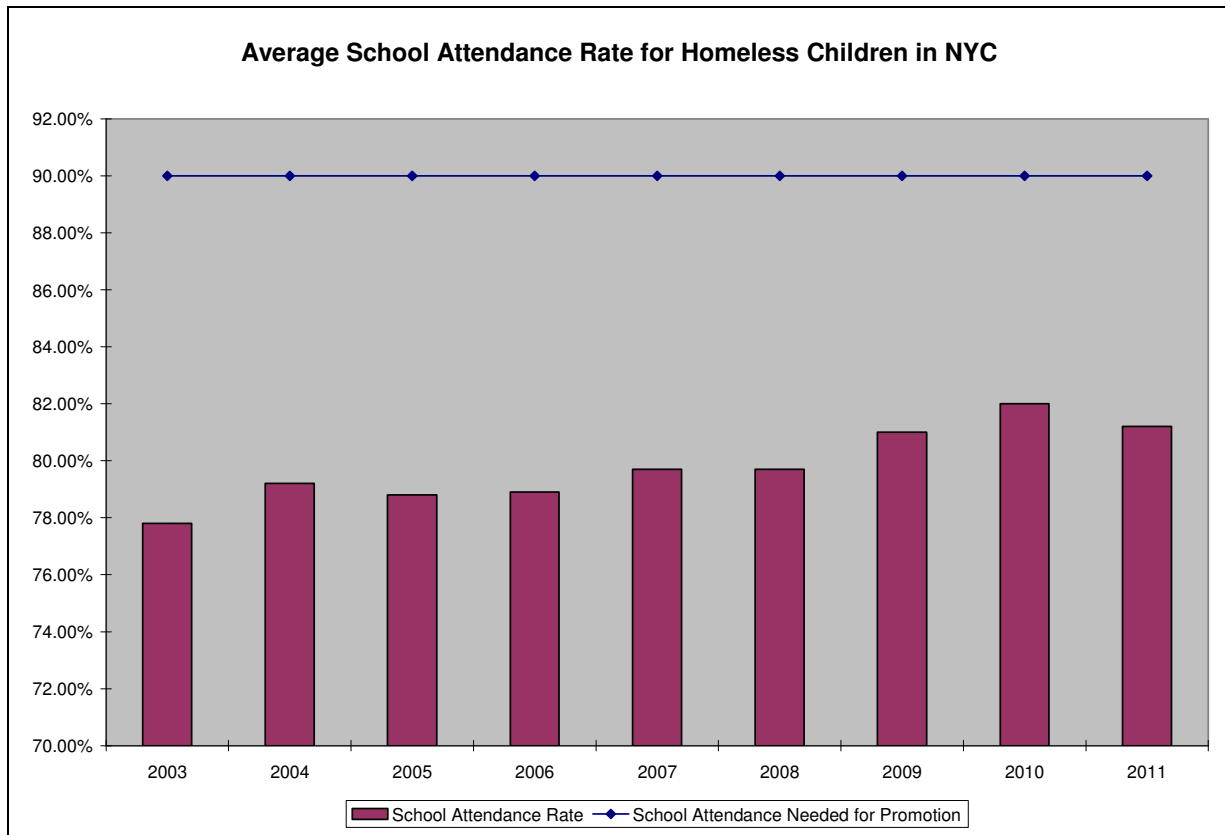

One of the earliest literature reviews conducted in 1991, detailed research findings showing that homeless children experience an array of problems in their health, development, behavior, and

schooling.<sup>1</sup> Authors Yvonne Rafferty and Marybeth Shinn reported that homeless children were more likely to experience acute and chronic health problems, including respiratory infections, ear disorders, and gastrointestinal disorders. Additional health problems were attributed to hunger and poor nutrition among homeless children.

Homeless children were also found to have greater instances of developmental delays, likely due to disruptions in child care and instability in shelter placements. Levels of clinical depression, anxiety, and behavior problems were also found to be higher among homeless children than their poor housed peers.

Not surprisingly, many of these negative factors also contribute to underachievement in school for many homeless children, who have been found to miss more school days, perform lower on tests, and be more likely to repeat grades.

Current City data echo these earlier findings and illustrate the challenges homeless students continue to face just getting to school. In 2011, homeless students have missed an average of 34 days of school each year, putting their average school attendance rate at 81.2 percent – well below the required 90 percent to advance to the next grade.

### Recent Studies Confirm Earlier Findings

In 2004, Rafferty and Shinn did a follow-up study focusing solely on academic achievement among homeless adolescents. The study found that homeless students changed schools more frequently, repeated grades more often, and reported worse school experiences than their housed peers. Additionally, homeless children “scored approximately six percentile points worse

than housed children on both reading and mathematics achievement, controlling for earlier achievement” prior to their shelter stay.<sup>2</sup> Overall,

*Findings are consistent with other recent studies of homeless school-age children, which suggest an underlying continuum of risk, with homeless children experiencing greater risk than their never homeless peers.*

A 2008 literature review examined updated research on the effects of homelessness on children and the results were nearly identical to what had been published before.<sup>3</sup> In almost all studies, homeless children performed worse on measures of academic achievement than their poor, but housed peers. And again, health and developmental problems showed up more frequently among homeless children.

*The overall pattern of findings across these studies suggests that more often than not, children’s exposure to homelessness increases their risk of adverse outcomes.*

### Overlooked Consequences of Child Homelessness

Both the 2004 and 2008 studies also addressed an additional concern for homeless children: separation from their mothers and/or caregivers. In 2004, Rafferty et al. found that 44 percent of the homeless mother participants had become separated from one or more of their children during their time of homelessness. Five years later, 79 percent of the children were still separated from their mothers at the follow-up interview.

A 2002 study looked at the issue of mother-child separation more closely.<sup>4</sup> It was found that homeless mothers experienced separation from their children at a vastly higher rate than housed mothers – 44 percent versus eight percent. Other factors such as domestic violence, maternal drug dependence and institutionalization predicted mother-child separations, but no predictor was as strong as homelessness, which was equivalent in size to 1.9 other risk factors.

The most important takeaway from this study was its implication for past and future research – highlighting the fact that studies on homeless children may grossly underestimate negative consequences if they exclude separated children.

### Conclusion and Recommendations

Overall, the impact of homelessness on children has become clear through decades of study. While poverty alone creates health, developmental, behavioral, and educational problems for children, homelessness compounds these problems by adding additional stress and instability to children’s lives.

The good news is that children who experience homelessness can rebound fully from these challenges with a return to stable and permanent housing. Rafferty’s 2008 study showed that declines in educational achievement among homeless children did not continue upon their return to permanent housing. At the follow up interview, these formerly-homeless families were just as stable as families that had been consistently housed. It is important to note, however, that most homeless families in the study received permanently-affordable housing. They did not leave shelter on their own or receive a time-limited subsidy like the City of New York’s flawed Advantage program.

Following this wealth of research and particularly in response to the record numbers of homeless children currently in shelter, the Coalition for the Homeless calls on Mayor Bloomberg to change course from his current homeless policy. In 2005, his administration cut off homeless families from receiving priority for federal housing assistance, including public housing and Section 8 vouchers. As a result, homeless families' access to these resources has been severely limited. In fiscal year 2010, homeless families received only 2 percent of 5,500 available public housing apartments and only 3 percent of 7,500 Section 8 vouchers.

Since 2005, the City has experimented with time-limited rental subsidies that do not provide permanent housing critical to stabilizing homeless girls and boys. Instead, they have created a revolving door back to shelter for thousands of formerly-homeless families. And it remains unknown what effects multiple episodes of homelessness have on children's educational and health outcomes.

Coalition for the Homeless calls on Mayor Bloomberg and other City officials to reverse course from current disastrous policies and enact the following:

*1. Immediately begin to use "one in three" available public housing apartments and Federal housing vouchers to help homeless families and individuals move from shelters to permanent housing.*

- This can be swiftly accomplished by using the existing priority system for both the New York City Housing Authority (NYCHA) public housing and voucher waiting lists, which makes households referred by the NYC Department of Homeless Services the highest priority applicants.
- In addition, NYCHA should act to restore the separate "emergency priority" for all homeless households that was reduced in 2005.

*2. In coming years, the City should set aside a significant percentage of City-assisted apartments - apartments created or preserved by the NYC Department of Housing Preservation and Development (HPD) - for homeless families and individuals.*

- This policy would build on the success of Mayor Koch's ten-year "Housing New York" program which allocated 15,000 affordable apartments – 10 percent of all housing units created or preserved under the program – for homeless New Yorkers.
- Currently Mayor Bloomberg's "New Housing Marketplace" plan allocates only around 4 percent of all City-assisted apartments to homeless people, even at a time of much worse homelessness.
- The City should also allocate a significant share of HPD-administered Federal housing vouchers to help homeless New Yorkers.

BRIEFING PAPER

## Forty-one Thousand: As Mayor Bloomberg's Failed Policies Exacerbate Crisis, NYC Homeless Shelter Population Tops 41,000 People Per Night for First Time Ever

November 9, 2011

By Patrick Markee, Senior Policy Analyst, Coalition for the Homeless

New City data shows that the New York City municipal shelter population now exceeds 41,000 homeless people per night for the first time since modern homelessness began three decades ago. Following are the highlights of the alarming new homelessness data:

- There are now **more than 41,000 homeless adults and children** sleeping in the New York City shelter system each night – the **first time ever that the shelter population has exceeded 40,000 people**.
- **The number of homeless children in New York City has reached an all-time record high**, with **nearly 17,000 children** sleeping in municipal shelters each night. Since May alone the **number of homeless children in shelters has increased by 10 percent**.
- The number of homeless children and families in New York City has **continued to rise dramatically since the spring, when the Bloomberg administration eliminated all housing assistance programs** designed to help homeless families move from shelters to permanent housing. Since May the **total number of homeless families in shelters has increased by more than 5 percent**.

- Homeless families are also forced to stay in shelter for longer periods. **Average shelter stays have risen from eight to eleven months over the past year**, and have **risen 8 percent** since May alone.
- During the last fiscal year, the City spent **more than \$1 billion on homeless services for the first time ever** – nearly twice what the City spent on homeless services when Mayor Bloomberg took office.
- The **total homeless shelter population is 33 percent higher** than when Mayor Bloomberg took office, and the **number of homeless families is 45 percent higher** than when the Mayor took office.

Back in May, shortly after City officials ended the troubled Advantage program and refused to replace it with proven Federal housing programs, **Mayor Bloomberg and administration officials defended their latest controversial policy shift**. They said that the shelter population would not increase significantly, and predicted that fewer homeless families would seek shelter. In fact, the Mayor proposed a homeless services budget more than one fifth lower than the last fiscal year's actual expenditures.

**But only a few short months later, the verdict on Mayor Bloomberg's latest disastrous homeless policy shift is in.** And the result is a new all-time record homeless population in New York City – more than 41,000 people for the first time ever – with even further increases expected in the coming months. The number of **homeless families entering municipal shelters is back to historically high levels**, and homeless children and families are staying longer and longer in the expensive shelter system.

Mayor Bloomberg's radical departure from the proven policy of giving the homeless access to permanent, affordable housing has failed. As we did in our *State of the Homeless 2011* report, Coalition for the Homeless calls on the City to:

- **Return to the successful policies of previous New York City mayors of targeting “one in three” Federal housing resources to homeless New Yorkers; and**
- **Return to the successful policy of targeting a significant share of City-assisted housing units to homeless families and individuals.**

### **Forty-one Thousand: New Data Shows Historic All-Time Record NYC Homeless Shelter Population**

In the wake of Mayor Bloomberg's decision to eliminate all housing assistance for homeless families, the number of homeless people sleeping each night in New York City municipal shelters has reached more than 41,000 people for the first time ever.

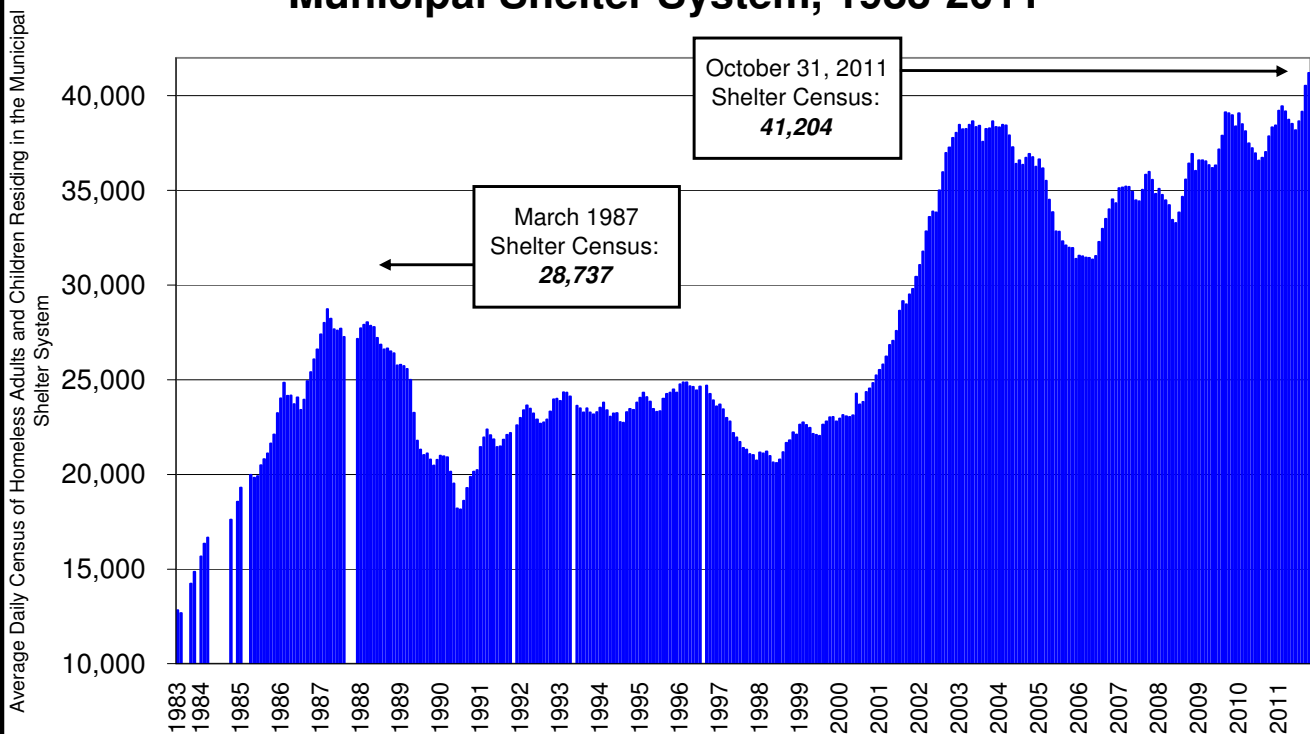

Still struggling with high unemployment and the widening gap between incomes and apartment rents, more and more New Yorkers have been driven into homelessness. **However, now – for the first time since modern homelessness began three decades ago – New York City's mayor has no housing assistance program in place to help homeless children and families escape the shelter system and secure permanent housing.**

Following are highlights of recently released City data:<sup>1</sup>

- At the end of October there were **41,204 homeless adults and children sleeping in New York City municipal shelters, an all-time record**. This is the first time ever that the number of homeless people sleeping each night in the New York City shelter system has exceeded 40,000 people.
- Since last year (October 2010 to October 2011), the **total number of homeless people in the New York City municipal shelter system each night has increased by 9 percent**.
- Since May of this year – after the City eliminated all housing assistance for homeless families – the **total number of homeless people in the New York City municipal shelter system each night has increased by 7 percent**.

- ***The number of homeless children in New York City shelters – 16,934 children at the end of October – has reached an all-time record high.*** Since May the ***number of homeless children in shelters has increased by 10 percent.***
- Since last year (October 2010 to October 2011), the ***number of homeless children in New York City shelters each night has increased by 13 percent.***
- Since May of this year – after the City eliminated all housing assistance for homeless families – the ***number of homeless children in New York City shelters each night has increased by 5 percent.***
- Homeless families are staying in the municipal shelter system for longer periods. Average shelter stays have ***risen from eight to eleven months – a remarkable 28 percent – over the past year,*** and have ***risen 8 percent between May and September alone.***
- The ***number of homeless single adults has also increased significantly during the past year – 4 percent*** from October 2010 to October 2011. There are now more homeless single adults bedding down each night in municipal shelters than at any time since 1989.<sup>2</sup>
- Although Bloomberg administration officials claimed in May that fewer families would enter the shelter system in the absence of housing subsidies, the number of homeless families entering shelters is at historically high levels. Through September of this year, an ***average of 1,252 families entered the municipal shelter system each month, making 2011 the third worst year since the City began keeping records three decades ago.***
- As detailed in our *State of the Homeless 2011* report, Mayor Bloomberg's experiments with flawed time-limited subsidy programs like the Advantage program have ***forced thousands of formerly-homeless children and families back into the shelter system and homelessness.***
- In the seven years (FY 1999-FY 2005) before the Bloomberg administration's time-limited subsidies were implemented – that is, during the period when the City used Federal housing programs to help families move from shelters to permanent housing – an ***average of 25 percent of all families entering the municipal shelter system had been homeless in the past.***
- In contrast, in the recently-ended FY 2011, an ***average of 49 percent of all families entering the shelter system – nearly half of all families entering shelter – had been homeless in the past.***
- During the last fiscal year, the City spent ***more than \$1 billion on homeless services for the first time ever*** – nearly twice what the City spent on homeless services when Mayor Bloomberg took office.

### **Time for Change: The Latest Bloomberg Homeless Policy Shift Has Already Failed**

With the elimination of the controversial Advantage program and his refusal to use more effective Federal and City housing resources to address the problem of homelessness, Mayor Bloomberg is the first New York City mayor in three decades to have no plan whatsoever to help homeless children and families escape homelessness.

Now, with more than 40,000 homeless children and adults crowded into municipal shelters each night and the shelter population on the rise, the time to reverse Mayor Bloomberg's failed policies is long overdue.

As we wrote in our State of the Homeless 2011 report, Mayor Bloomberg and his administration should look to the past and learn the lessons of previous mayors who, at various times, had to confront rising homelessness. Indeed, Mayors Koch, Dinkins, and Giuliani may have little in common, but they did agree on one thing: ***The smart, cost-effective, and proven way to help homeless children and families move from costly shelters to long-term, stable homes is by using Federal housing programs and City affordable housing resources.***

Coalition for the Homeless calls on Mayor Bloomberg and other City officials to build on the success of the past and enact the following policies:

***1. Immediately begin to use "one in three" available public housing apartments and Federal housing vouchers to help homeless families and individuals move from shelters to permanent housing.***

- This can be swiftly accomplished by using the existing priority system for both the New York City Housing Authority (NYCHA) public housing and voucher waiting lists, which makes households referred by the NYC Department of Homeless Services the highest priority applicants.

- In addition, NYCHA should act to restore the separate “emergency priority” for all homeless households that was reduced in 2005.

**2. In coming years, the City should set aside a significant percentage of City-assisted apartments – apartments created or preserved by the NYC Department of Housing Preservation and Development (HPD) – for homeless families and individuals.**

- This policy would build on the success of Mayor Koch’s ten-year “Housing New York” program which allocated 15,000 affordable apartments – 10 percent of all housing units created or preserved under the program – for homeless New Yorkers.
- Currently Mayor Bloomberg’s “New Housing Marketplace” plan allocates only around 4 percent of all City-assisted apartments to homeless people, even at a time of much worse homelessness.
- The City should also allocate a significant share of HPD-administered Federal housing vouchers to help homeless New Yorkers.

---

<sup>1</sup> All nightly shelter census data in this briefing paper is from reports produced by the NYC Department of Homeless Services (DHS). The data in this briefing paper, which is consistent with City homelessness data reported for more than 25 years, is more comprehensive than the more limited data available on the DHS website. Since 2005 the DHS website has, for reasons that have never been explained publicly, excluded data on homeless families and individuals residing in several different types of municipal shelters. For this reason, currently the DHS website’s homepage fails to include approximately 1,300 to 1,400 homeless people sleeping each night in municipal shelters, including approximately 200 families (with approximately 600 people) who reside in homeless shelters administered by the NYC Department of Housing Preservation and Development; approximately 370 people residing in DHS shelters for homeless veterans; and approximately 380 people residing each night in DHS “safe haven” shelters, which are restricted to chronically street homeless adults. (Note that the large majority of shelters for veterans and “safe haven” shelters were once included as part of DHS’s daily adult shelter census report.) However, note that this briefing paper does not include data for homeless people sleeping in DHS “stabilization beds,” which are also restricted to chronically street homeless adults; DHS has never publicly released this data, although currently there are approximately 150 to 200 homeless people in “stabilization beds” each night.

<sup>2</sup> Data for homeless single adults in municipal shelters is from three sources: (1) DHS daily census reports for shelters for homeless single men and women, which have been produced daily by the City since 1982; (2) DHS census reports for shelters for homeless veterans; and (3) DHS census reports for “safe haven” shelters, which are restricted to chronically street homeless adults. (Note that the large majority of shelters for veterans and “safe haven” shelters were once included as part of the DHS daily adult shelter census report. These shelters were “converted” to different service models beginning in 2007 and were then excluded, in various stages, from DHS daily adult shelter census report and from DHS’s website.) As noted above, data for homeless single adults does not include data for homeless people sleeping in DHS “stabilization beds,” which are also restricted to chronically street homeless adults; DHS has never publicly released this data, although currently there are approximately 150 to 200 homeless people in “stabilization beds” each night.
